

Dublin Airport Monthly Noise and Operations Report

April 2026

- Operations and Runway Use
- Noise Complaints
- Flight Track Monitoring

Part 1: Operations and Complaints

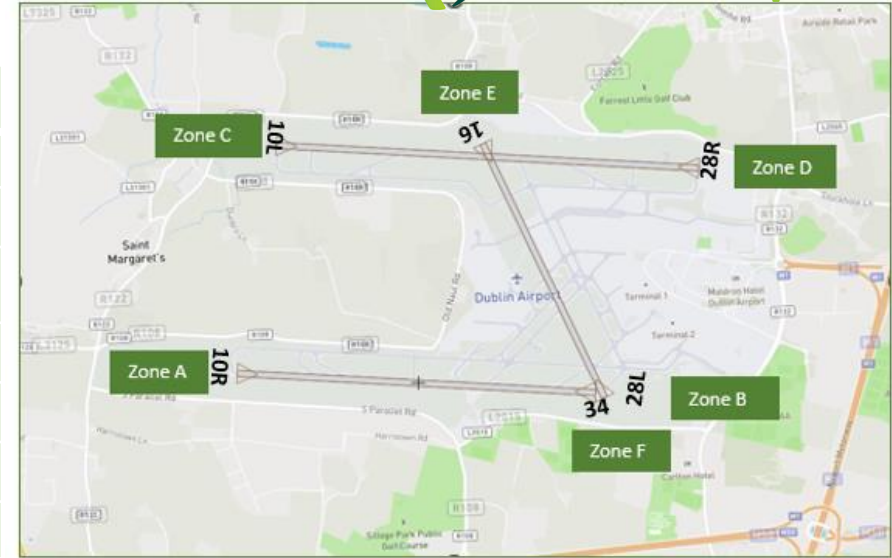

Page	Page Heading	Page Content
PART 1		
4.	Explanation of Terms	
5.	Operations – Movements and Runway Use	Provides an overview of the operations of the airport during the month, including arrival and departure movements, runway use, wind direction and movement comparisons with earlier months and the previous year.
6.	Operations – Runway and Track Use	Provides a representation of the distribution of arrivals and departures, along with data relating to the distribution of the main departure tracks.
7.	2025 Annual Departure Swathe Data	Provides an overview of 2025 runway and track use.
8.	Total Movements in the month by hour of day	Provides an overview of the number of movements by hour of the day.
9.	Noise Complaints - Complainant Statistics	Provides rolling data on complainant statistics, including total complaints received.
10.	Noise Complaints - Complainant Statistics	Provides data on the complaints received by area from top 10 complainants and a breakdown of complaints by the top five individuals.
11.	Noise Complaints – Area Analysis	Provides an overview of both the number of complaints and number of complainants by area.
12.	Noise Complaints – by Hour	Provides an overview of the number of movements by hour of the day.
PART 2		
13 – 21.	Flight Track Monitoring	

Term	Definition
Aircraft Movement	An aircraft movement is either the arrival or departure of an aircraft at Dublin Airport. For an arrival, the aircraft is detected by radar at least 50km from the airport and the route it takes is recorded in the noise management system until it touches down on one of Dublin Airport's runways. For a departure, the radar detects the flight as it leaves the ground and records the route until it is at least 50km away.
ANOMS	The Advanced Noise Management System is Dublin Airport's database and management system for recording aircraft operations, flight tracks, noise monitoring terminals and complaints.
Cat AB aircraft	Category A and B aircraft are light and propellor driven aircraft. This includes General Aviation aircraft (Cat A) and turbo-propellor aircraft such as the ATR72 (Cat B).
Cat CD aircraft	Category C and D are heavier, jet aircraft.
Runway Naming	Runways are named based on the direction (or heading) an aircraft faces during an operation on that runway. For parallel runways, the L or R indicates whether it is on the left or the right. Dublin Airport has three runways: <ul style="list-style-type: none">• South Runway - Operations are either on RW28L (facing west) or on RW10R (facing east)• North Runway – Operations are either on RW28R (facing west) or on RW10L (facing east)• Cross Runway – operations are either on RW16 (facing south) or on RW34 (facing north)
Wind Rose	Circular graph of wind strength and direction issued by Met Eireann. As aircraft need to take-off and land when facing into the wind (except in low wind conditions less than 5 knots), the wind rose will give an indication of runway use.
YTD	Year To Date
Zones A to F	The "zones" are runway end zones defined for this report. For example, Zone A is west of the South Runway and is overflowed by arrivals on RW10R and departures on RW28L.

April 2026 Operations – Movements and Runway Use

Aircraft Movements (Cat ABC&D) April 2026

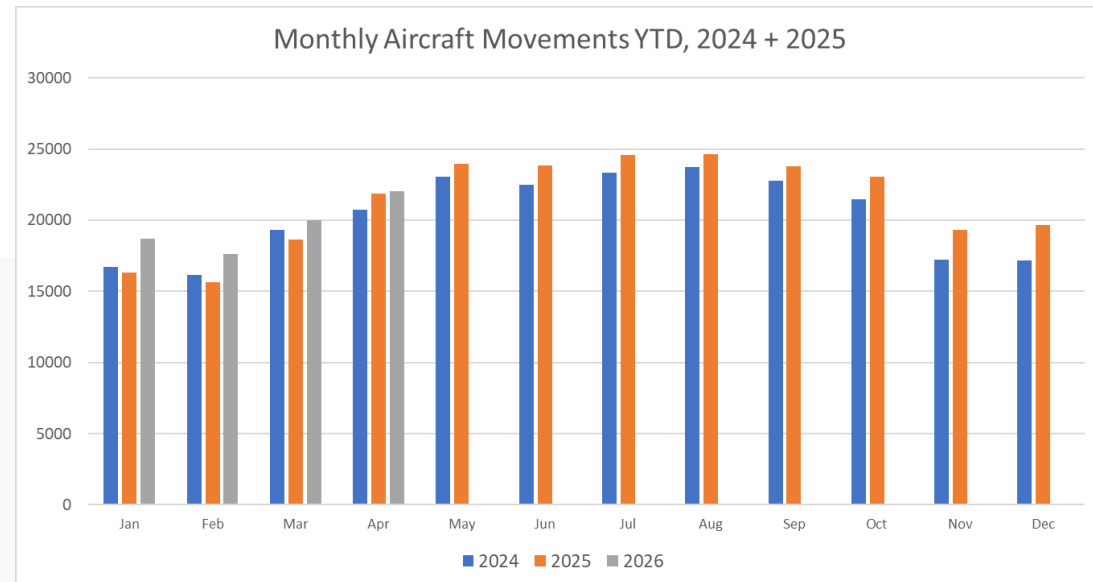

Zone		Arrivals		Departures		Total
A	South Runway	from West (RW10R)	493	to West (RW28L)	725	1,218
B		from East (RW28L)	5,814	to East (RW10R)	5,152	10,966
C	North Runway	from West (RW10L)	4,708	to West (RW28R)	5,011	9,719
D		from East (RW28R)	1	to East (RW10L)	124	125
E	Cross Runway	from North (RW16)	0	to North (RW34)	0	0
F		from South (RW34)	0	to South (RW16)	0	0
			11,016		11,012	22,028

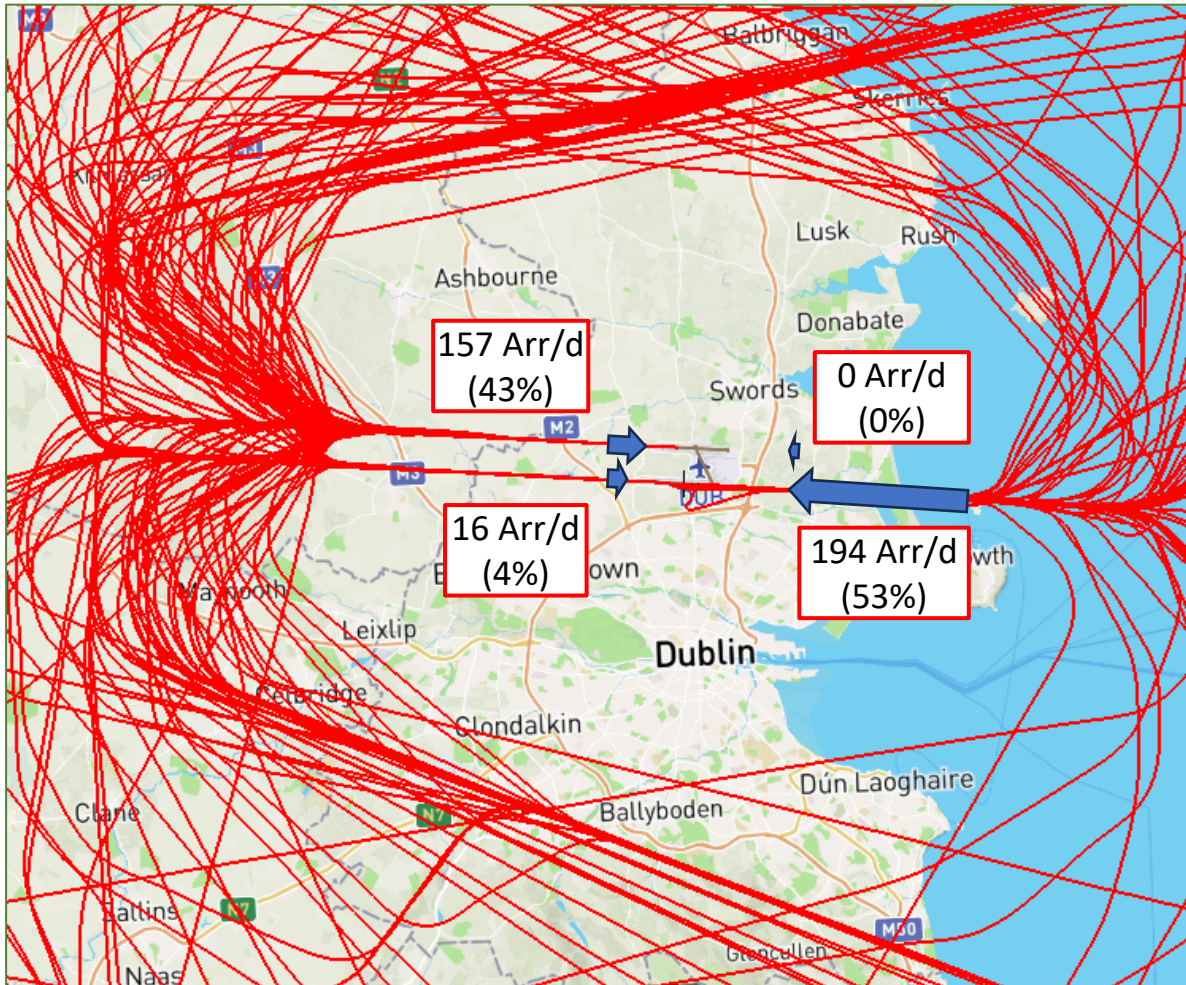

April 2026 Wind Rose: shows percentage of time in each wind direction. Table below shows 2025 and YTD – westerly and easterly operations

		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
2026	W	56%	58%	80%	53%									
	E	44%	42%	20%	47%									
2025	W	82%	45%	55%	32%	44%	80%	80%	67%	78%	75%	76%	58%	65%
	E	18%	55%	45%	68%	56%	20%	20%	33%	22%	25%	24%	42%	35%

Monthly Aircraft Movements YTD, 2024 + 2025

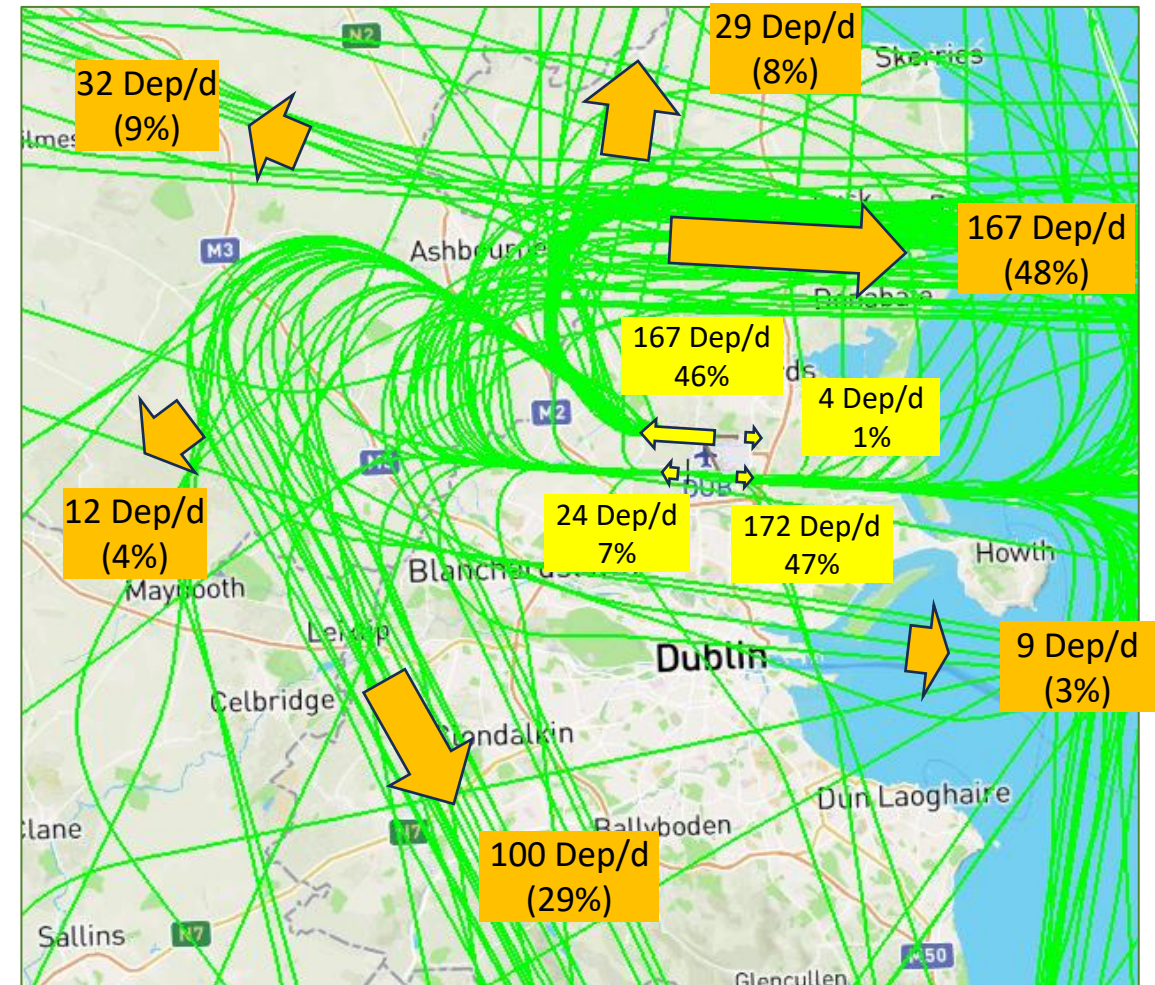

April 2026 Operations – Runway and Track Use

Graphic depicts:

- Average arrival movements per day (d) on each main runway
- % arrivals on each main runway this month
- Note: example flight track selection used

Graphic depicts:

- Average departure movements per day on each main runway (yellow boxes)
- % departures on each main runway this month (yellow boxes)
- Average departures per day on each main track swathe (orange boxes)
- Note: example flight track selection used

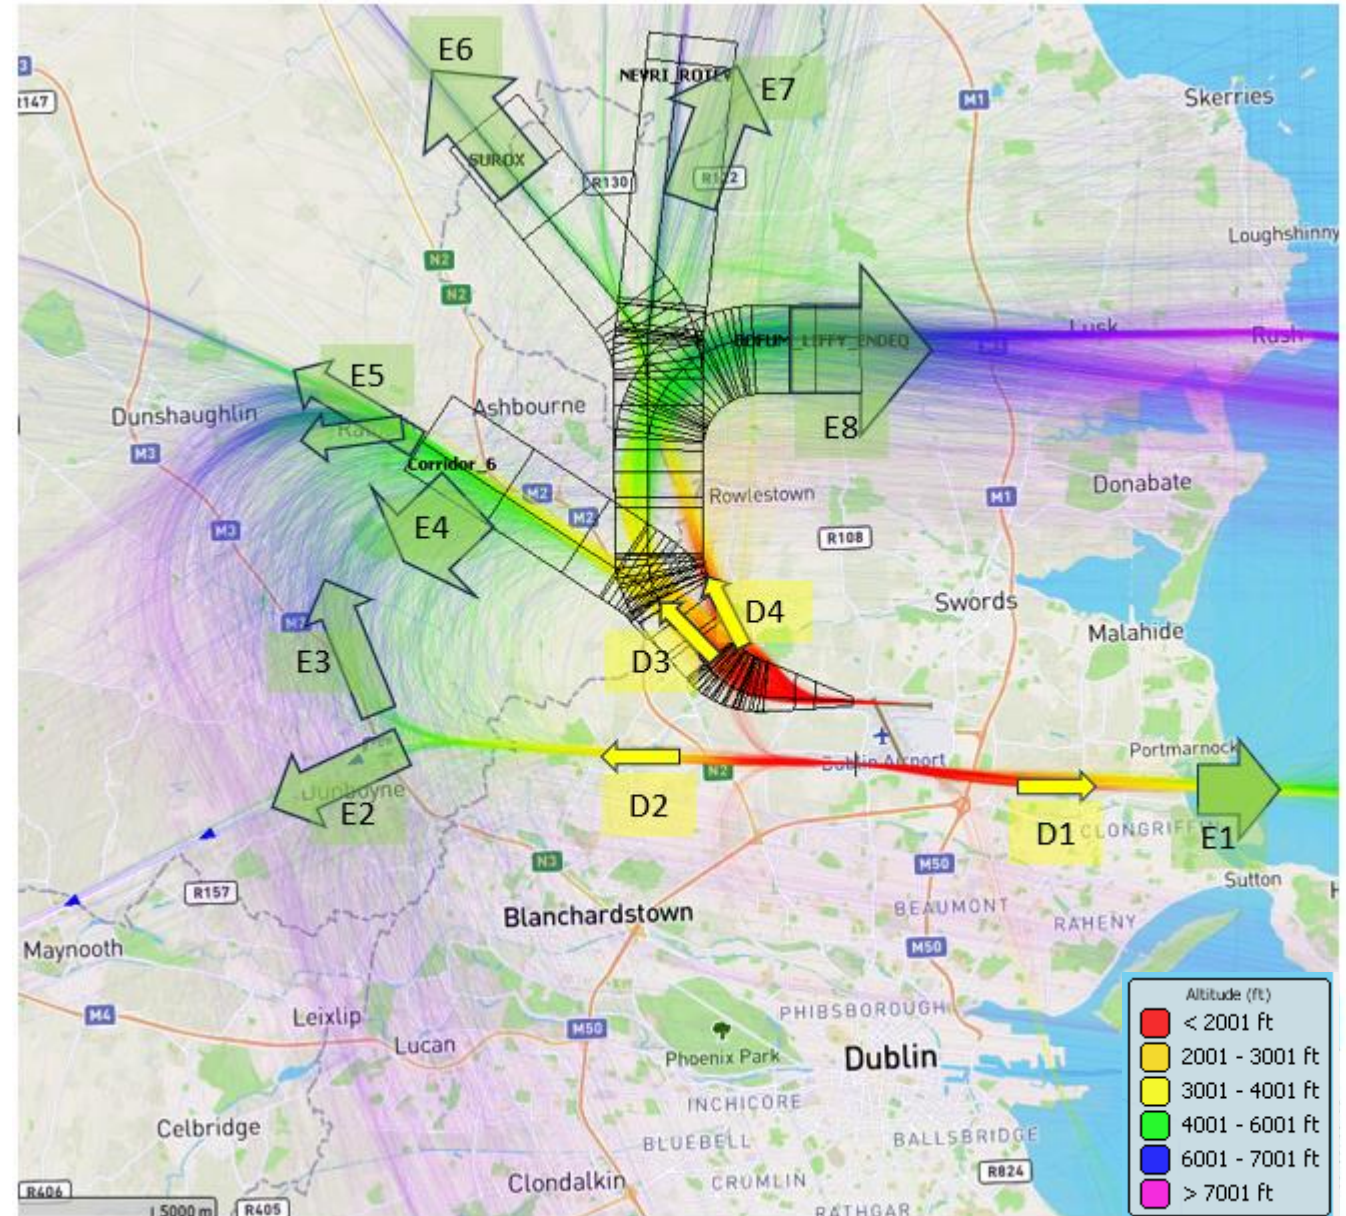

2025 Departure Swathe Data – Runway and Track Use

This table shows how departing aircraft were distributed across different flight path corridors ('swathes') during 2025
 ~1,000 – 3,000 ft (D1 – D4)

	Swathe	Avg Dep/d	Percentage of Departures
D1	10R	124	36%
D2	28L	26	8%
D3	28R Jet	177	50%
D4	28R Turbo-prop	22	6%

~4,000 – 6,000 ft (E1 – E8)

	Swathe	~Avg Dep/d	Percentage of Departures
E1	10R (easterly dep)	124	36%
E2	28L, S- & W-bound (left turn)	13	4%
E3	28L, N- & E-bound (right turn)	13	4%
E4	28R, S- & W-bound, left turn from NPR	25	7%
E5	28R, S- & W-bound, exit end of NPR	50	15%
E6	28R, NW-bound	8	2%
E7	28R, N-bound	19	6%
E8	28R, E-bound	87	26%

April 2026 – Total Movements in the Month by hour of day

Night Hours			
Hour of day	Arrivals	Departures	Movements
00:00	480	60	540
01:00	210	10	220
02:00	40	30	70
03:00	50	10	60
04:00	200	30	230
05:00	120	220	330
06:00	70	880	940
23:00	410	90	500
Total	1580	1310	2890

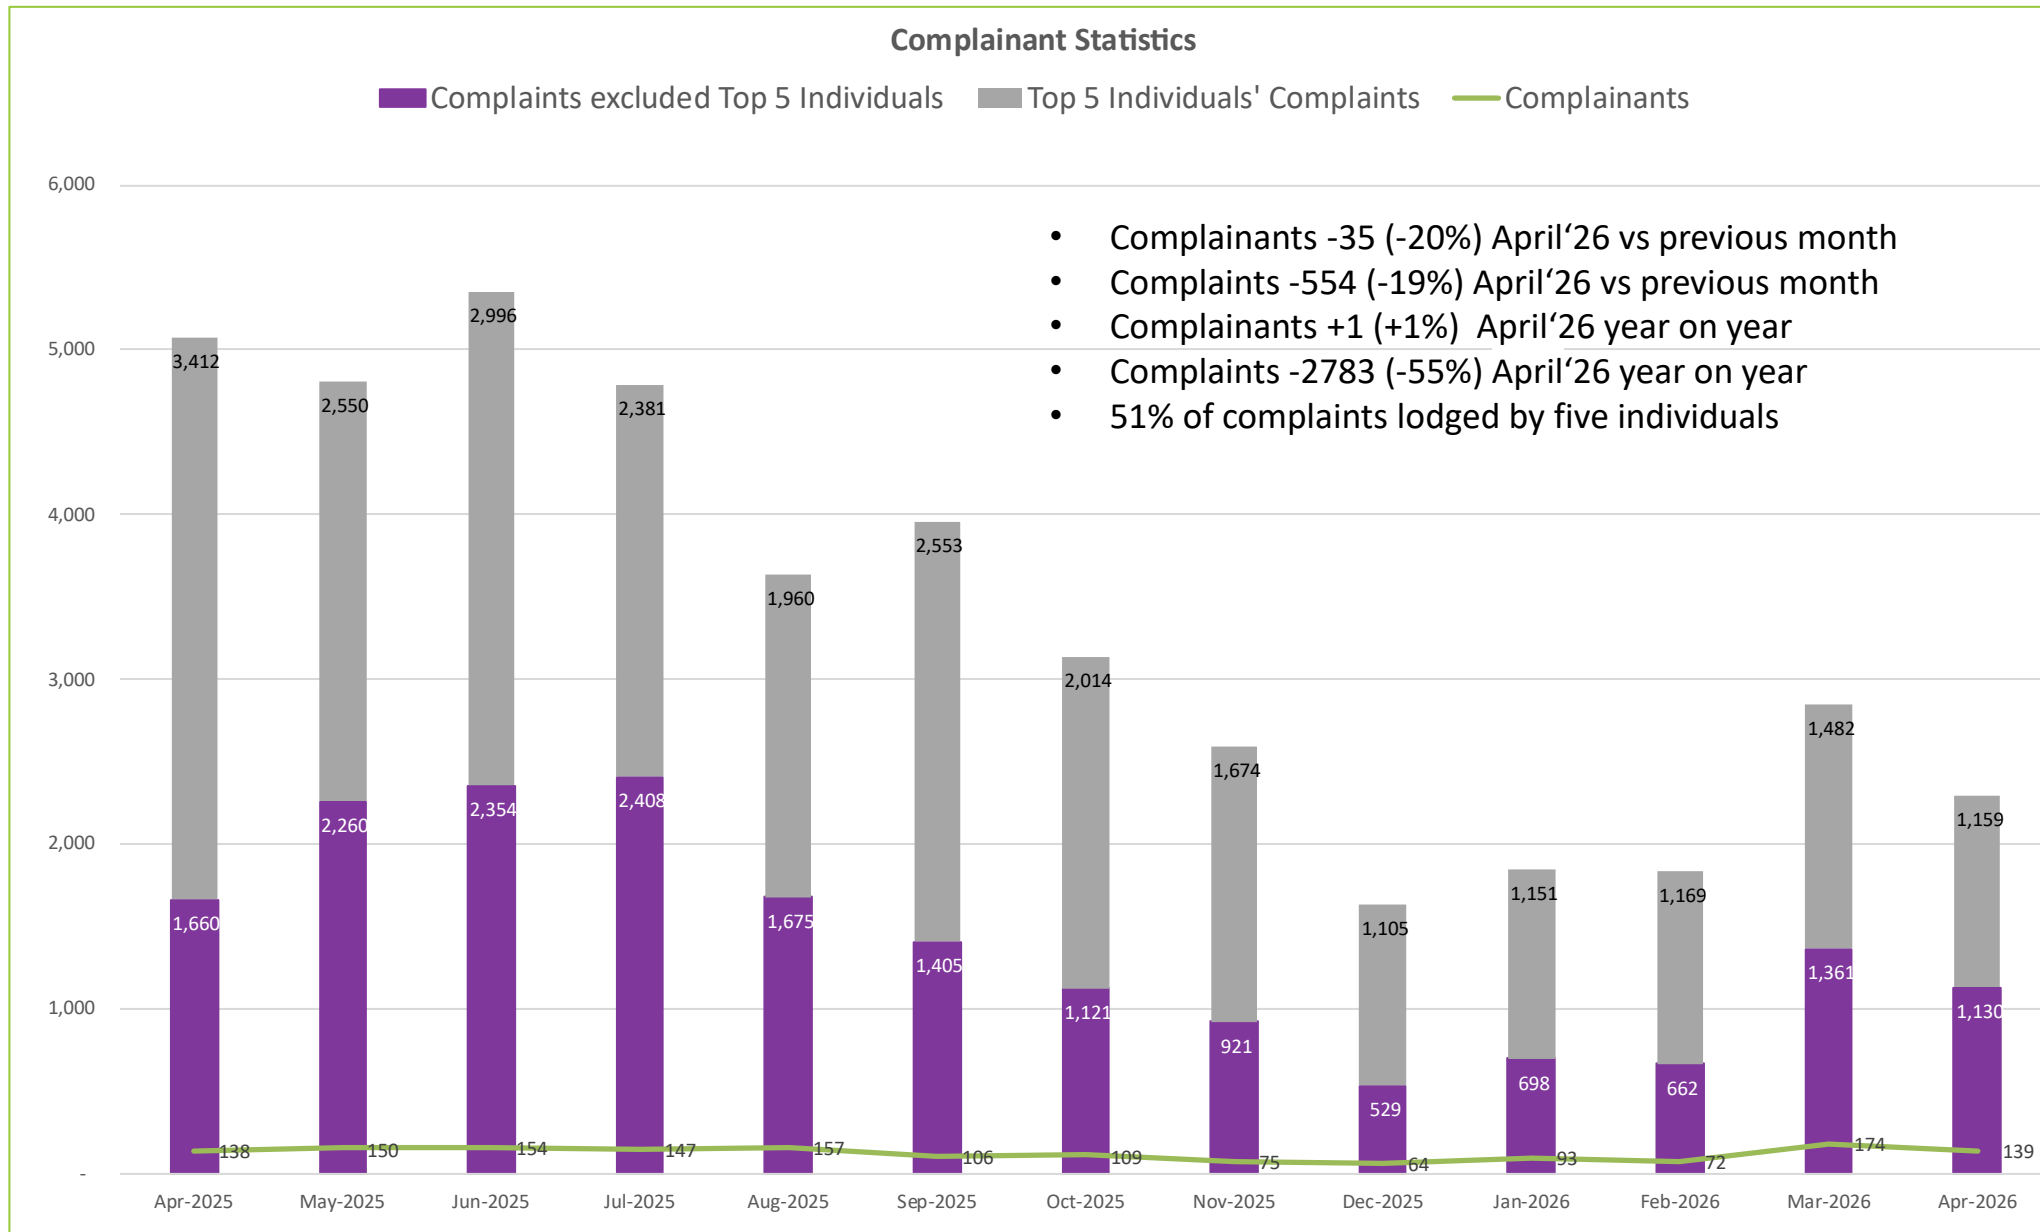

Day Hours			
Hour of day	Arrivals	Departures	Movements
07:00	550	1000	1550
08:00	620	570	1190
09:00	630	530	1160
10:00	680	640	1330
11:00	660	700	1360
12:00	610	590	1210
13:00	640	720	1350
14:00	680	690	1370
15:00	500	650	1150
16:00	490	700	1190
17:00	660	560	1210
18:00	610	670	1280
19:00	480	710	1190
20:00	480	440	920
21:00	520	350	860
22:00	640	190	830
Total	9450	9700	19150

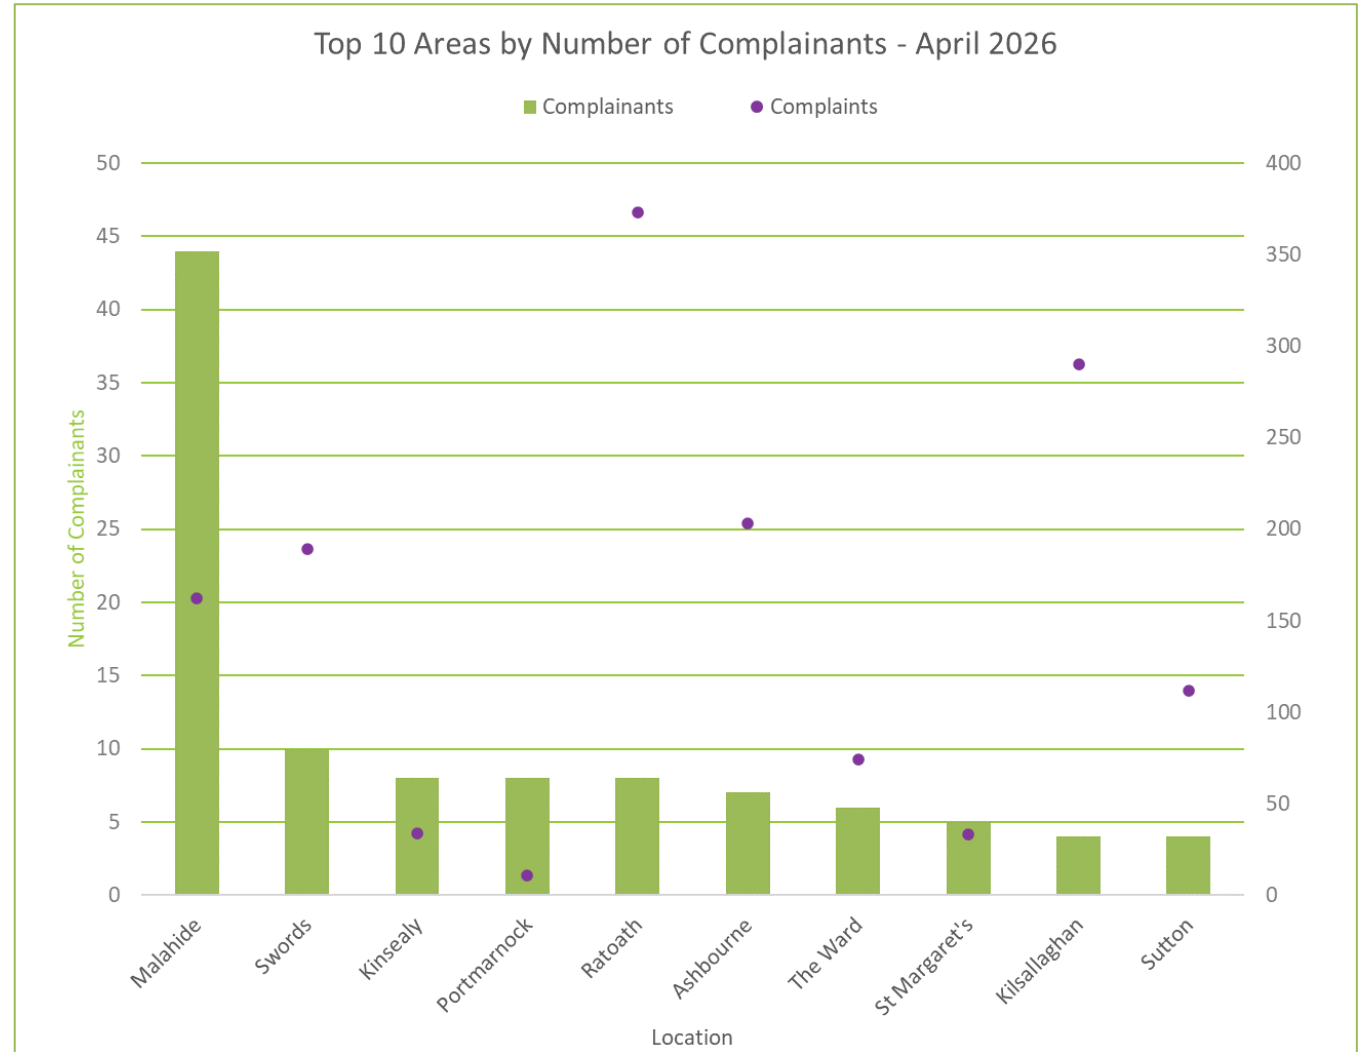

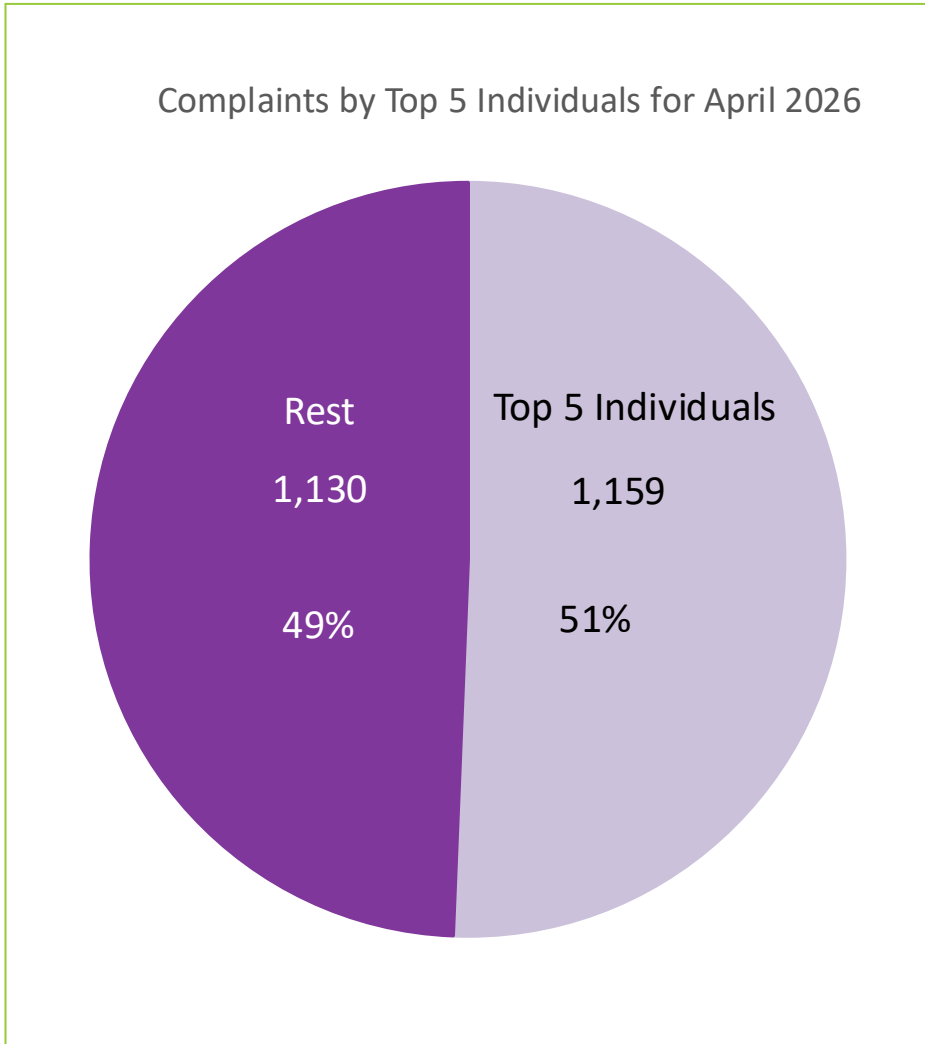

Arrivals & Departures Distribution : April 2026

* Rounded to nearest 10

Noise Complaints - Complainant Statistics

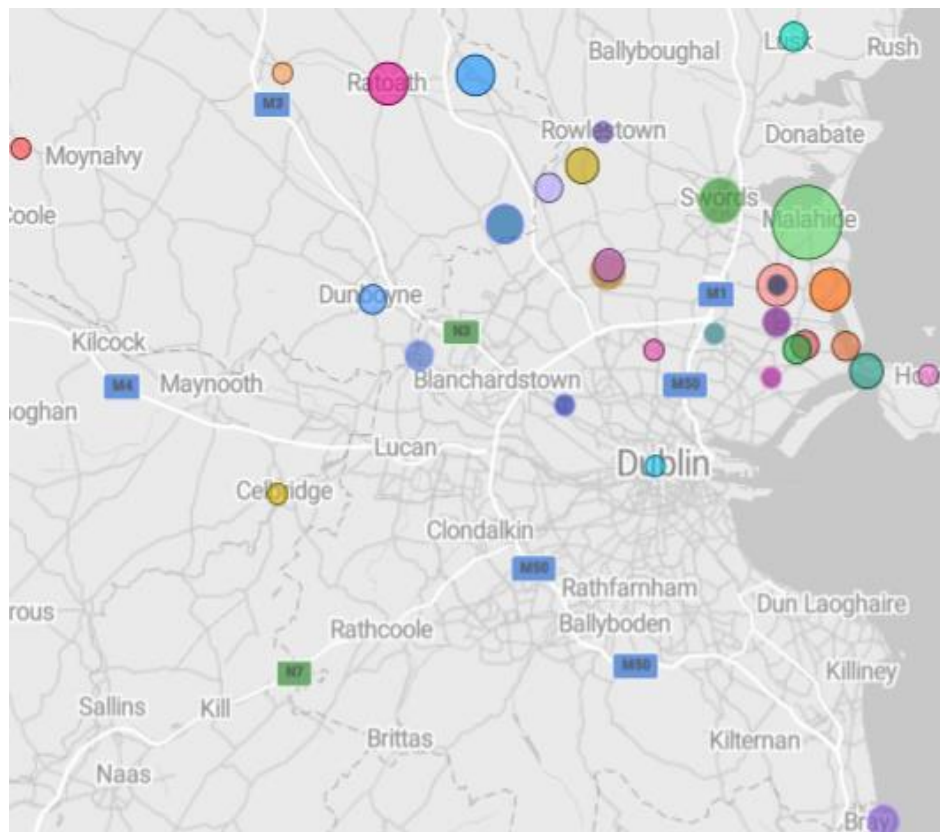

The left-hand axis (green) shows the number of individual complainants, while the right-hand axis (purple) represents the total number of complaints received from each area.

The rise in complaints from the Malahide area was associated with the temporary three days closure of the South Runway to facilitate essential emergency repair works. As a result, flights operating from the single North Runway may have overflown Malahide.

April 2026 – Complaints & Complainants Map

Area	Complaints	Complainants
Malahide	162	44
Swords	189	10
Kinsealy	34	8
Portmarnock	11	8
Ratoath	373	8
Ashbourne	203	7
The Ward	74	6
St Margaret's	33	5
Kilsallaghan	290	4
Sutton	112	4
Bray	3	3
Hollystown	277	3
Baldoyle	125	2
Balgriffin	270	2
Clongriffin	4	2
Donaghmede	3	2
Dunboyne	3	2
Kilcoskan	33	2
Lusk	5	2
Meath	3	2
Ongar	36	2
Ashtown	12	1
Ballymun	1	1
Celbridge	3	1
Clonsaugh	3	1
Dublin	2	1
Dunshaughlin	6	1
Howth	3	1
Raheny	2	1
Rolestown	2	1
Summerhill	9	1
Tyrrelstown	3	1

Complainants by Area: Bubble Map

Complainants by Area

(Areas where Complainants > 2)

*Only areas with more than two complainants are shown

April 2026 - Noise Complaints – by Hour of Operations

Night		
Hour of operation	Number of complaints	Number of complainants
00:00	147	24
01:00	37	5
02:00	24	3
03:00	9	6
04:00	23	5
05:00	67	20
06:00	260	18
23:00	128	32
Total	695	

Day		
Hour of operation	Number of complaints	Number of complainants
07:00	241	32
08:00	158	22
09:00	88	20
10:00	49	17
11:00	56	17
12:00	45	14
13:00	81	22
14:00	70	20
15:00	45	14
16:00	72	9
17:00	69	14
18:00	92	14
19:00	104	13
20:00	93	17
21:00	166	45
22:00	165	53
Total	1,594	

Part 2: Flight Track Monitoring

Page	Page Heading	Page Content
14.	Explanation of Terms	
15.	Standard Instrument Departures (SID) North Runway	<ul style="list-style-type: none"> • AirNav Ireland maps displaying the departure SIDs from North Runway towards the West and the East.
16.	Standard Instrument Departures (SID) South Runway	<ul style="list-style-type: none"> • AirNav Ireland maps displaying the departure SIDs from South Runway towards the West and the East.
17.	Noise Preferential Routes (NPR)	<ul style="list-style-type: none"> • Map showing the Noise Preferential Routes (NPR) for Jet Aircraft Departures from the North and South Runways in both Easterly and Westerly directions.
18.	Departure Track Adherence data (2025 and YTD 2026)	<ul style="list-style-type: none"> • Chart and table of the percentages of departures each month since January 2024 that operated within the NPR until reaching the minimum height.
19.	Track NPR Deviation Examples – North Runway	<ul style="list-style-type: none"> • Maps showing examples of aircraft departure flight tracks from the North Runway that left the NPR before reaching the required minimum height of 4,000 ft.
20.	Track NPR Deviation Examples – South Runway	<ul style="list-style-type: none"> • Maps showing examples of aircraft departure flight tracks from the South Runway that left the NPR before reaching the required minimum height of 3,000 ft.

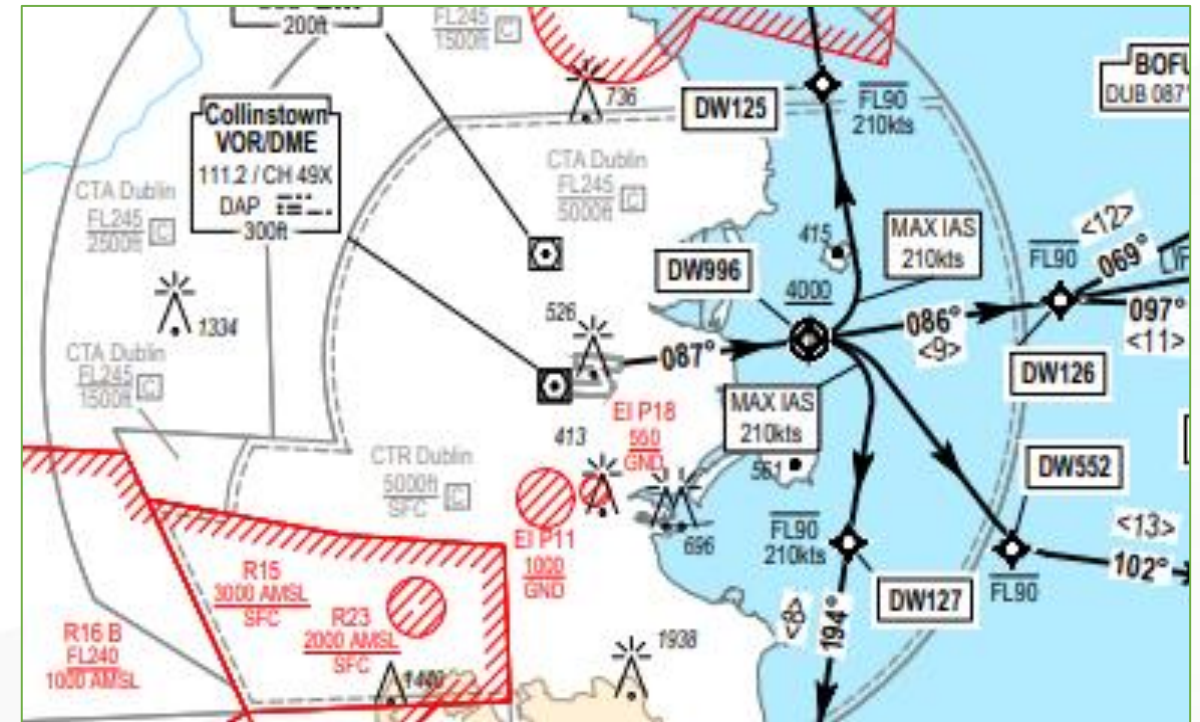

Term	Definition
Arrival Tracks	Arriving aircraft must fly in a straight line for at least the final 11km of their approach. Aircraft come into the airport at a precise downward angle of 3 degrees, which means that they are at a height of 1,800ft when they join the final approach at the 11km point.
Departure Tracks	Departing jet aircraft are required to follow procedures defined by the SID and to stay within the Environmental Corridor, also called the Noise Preferential Route (NPR).
Environmental Corridor	This is the same as the NPR (see below).
Noise Preferential Route (NPR)	Each SID (see below) at Dublin Airport has an "Environmental Corridor" also called a Noise Preferential Route (NPR). An NPR starts at the runway and is 240m wide and then, following the SID, fans out until the aircraft reaches a minimum altitude of 3,000 ft (South Runway) or 4,000 ft (North Runway). This only applies to jet aircraft – Cat C or D. (See Page 17)
Standard Instrument Departure (SID)	Depending on the departure runway and final destination, departing aircraft follow routes called Standard Instrument Departures (SID). SIDs allow aircraft to safely depart an airspace following a pre-defined route. (See Pages 16 and 17)
Track Adherence	To comply with an NPR, a departing jet aircraft needs to stay within the corridor until it reaches the required 3,000ft elevation (4,000ft for North Runway departures). After that, the pilot may fly a more direct heading for the final destination. An aircraft may be instructed by Air Traffic Control to leave the NPR before the required height due to weather, traffic or other considerations.
Track Deviation	A jet aircraft deviates from the NPR if it leaves the corridor below 3,000 ft (for South Runway departures) or 4,000 ft (for North Runway departures).
Vectoring	In some cases, Air Traffic Control may instruct a pilot to deviate from an NPR before reaching the minimum required height. This may be due to weather, traffic congestion, or other reasons. This is called Vectoring. In such cases, the track deviation is not considered to be an infringement (or violation) of the rule.

Standard Instrument Departures (SID) North Runway

- Jet aircraft departures are required to follow these Standard Instrument Departures (SID).
- SIDs are developed taking into account various safety, operational and environmental considerations amongst others.

SID for North Runway (28R) departures to the west (westerly operations in westerly winds)

SID for North Runway (10L) departures to the east (easterly operations in easterly winds)

Noise Preferential Routes (NPR) for Jet Aircraft Departures

- Noise Preferential Routes (NPR) are passageways or corridors defined to either side of each SID path.
- An NPR is also called an Environmental Corridor.
- These only apply to the departures of jet (Category C and D) aircraft which are the larger aircraft.
- From South Runway, aircraft should not deviate from the NPR until reaching an altitude of 3,000ft.
- From North Runway, aircraft should not deviate from the NPR until reaching an altitude of 4,000ft.
- Deviation from the NPR is only permitted if directed by Air Traffic Control.

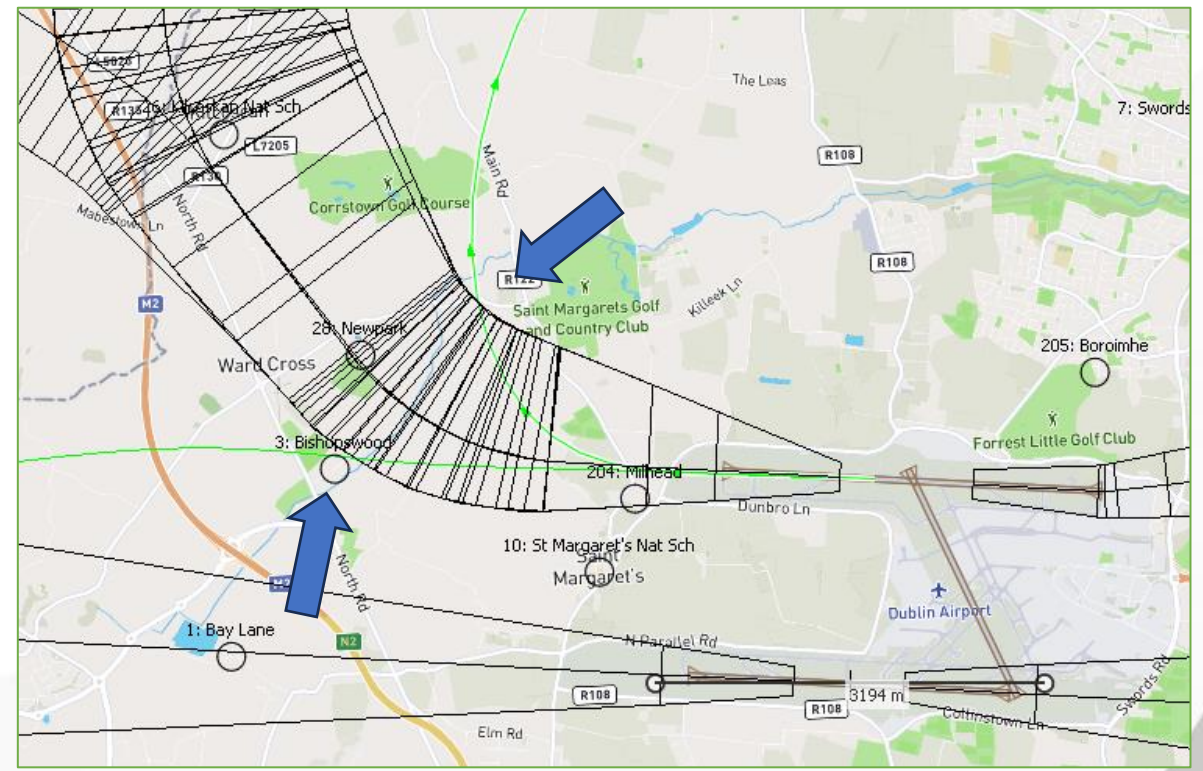

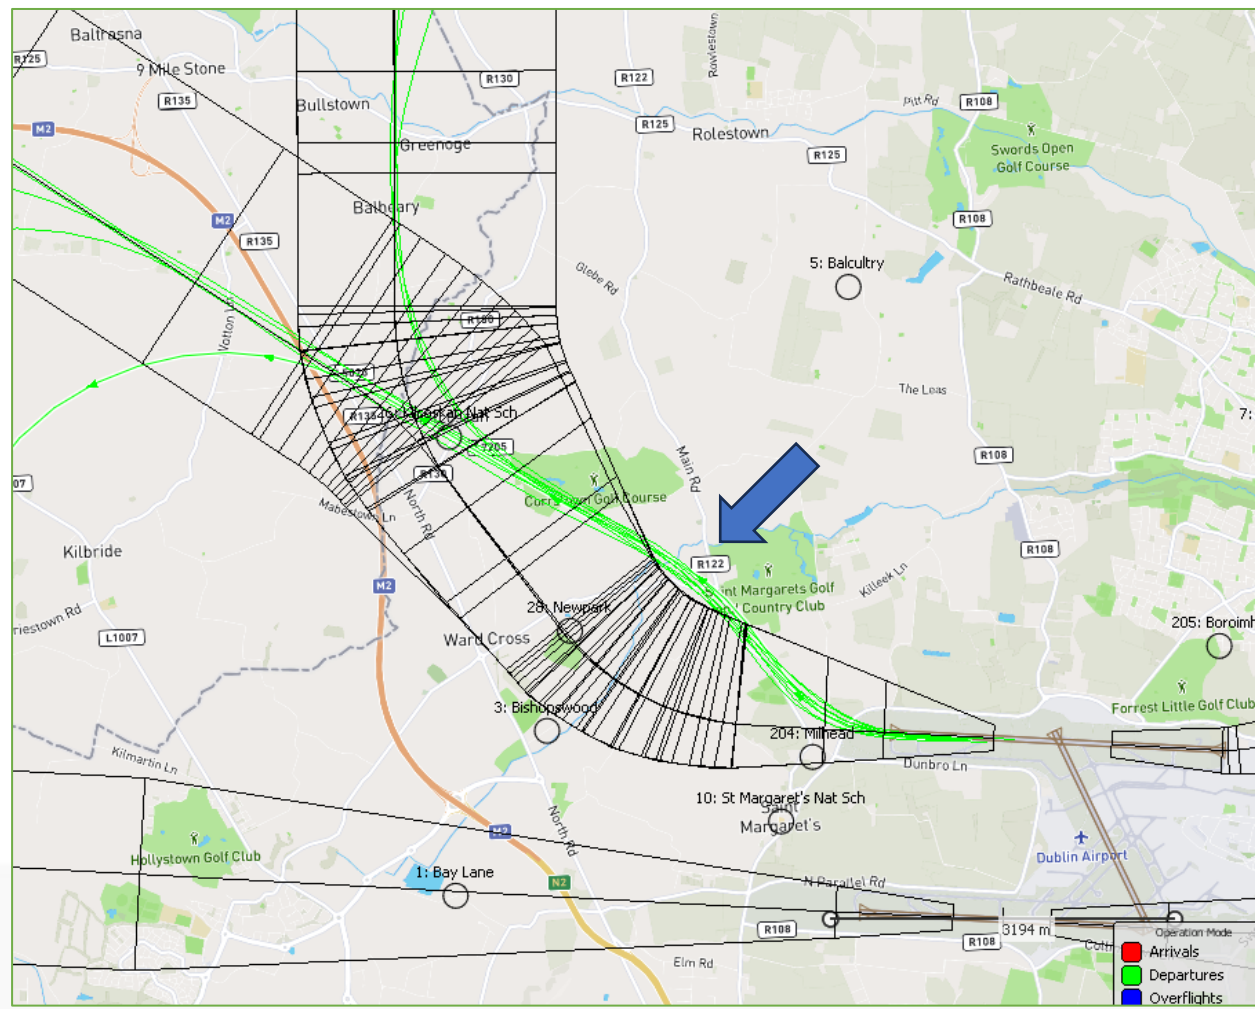

Departure Track Adherence (Monthly 2025 and 2026)

- Track Adherence refers to jet aircraft departures that remain within the NPR up to the minimum height.
- Both runways are displaying a high level of track adherence (over 90% for North Runway westerly and 100% for South Runway westerly and easterly)
- Further work is underway on improving track adherence which will include the implementation of a tool which can be used by AirNav Ireland and airlines to track and manage deviations and conduct detailed investigations into individual deviations.
- Note: North Runway easterly and Cross Runway operations are too seldom used to warrant reporting.

Departure Runway	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
10R (South Runway)	99.9%	100%	100%	100%									
28L (South Runway)	99.5%	100%	99.9%	100%									
28R (North Runway)	89.3%	90.5%	90.2%	91.1%									
Total Airport (2026)	94.8%	95.5%	93.2%	96.0%									
Total Airport (2025)	93.3%	96.0%	94.8%	97.4%	96.7%	94.0%	93.7%	94.9%	93.5%	94.4%	93.6%	95.1%	94.8%

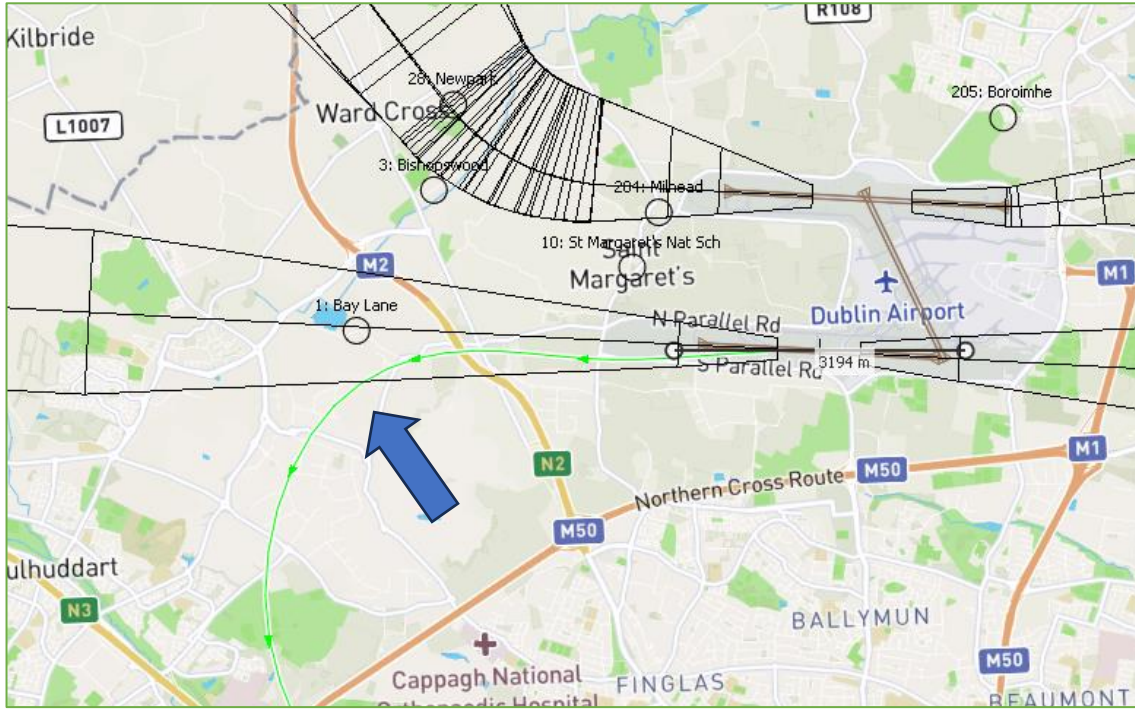

Track NPR Deviation Examples – North Runway (RW28R)

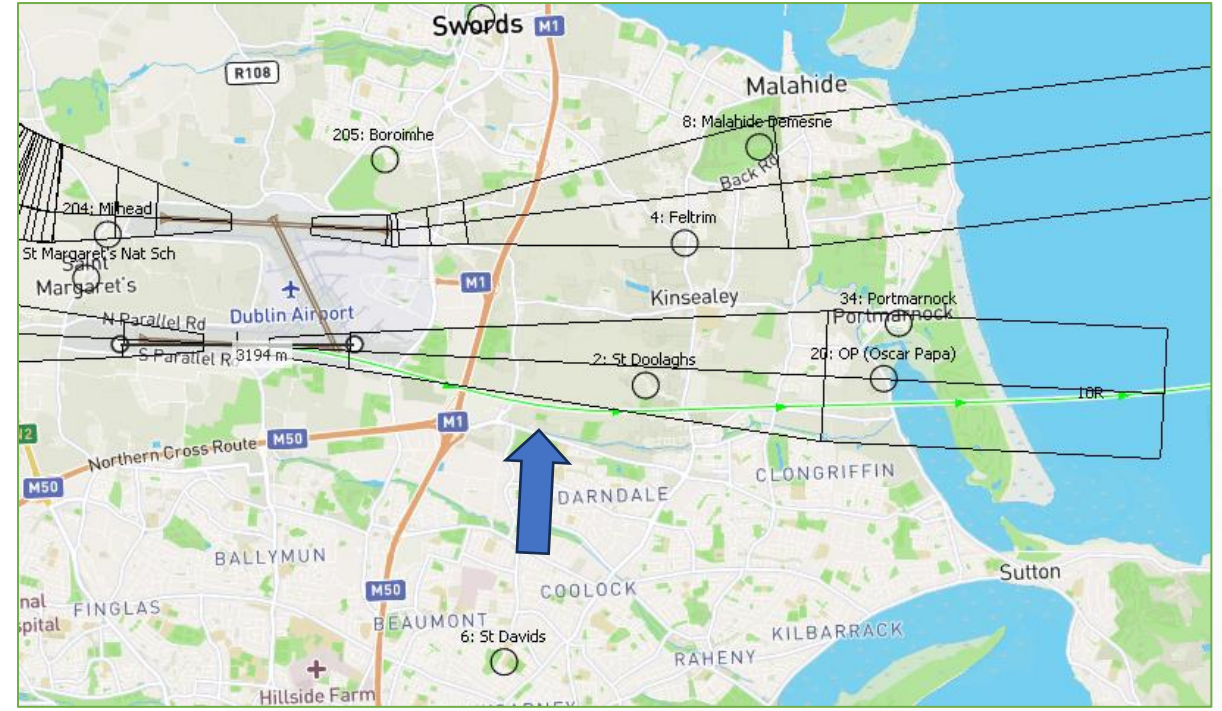

The above diagram displays two different departing flights which exited the North Runway NPR before they would have reached 4,000 ft altitude.

The above diagram displays a number flights which exited the North Runway NPR and then re-entered the NPR. This is a known issue for a small percentage of aircraft and Dublin Airport is working with the airlines and the aircraft manufacturer on resolving it.

Track NPR Deviation Examples – South Runway

A jet aircraft departed the South Runway heading west and then turned left (southward) not far after the M2 motorway before reaching 3,000ft.

This jet aircraft departed the South Runway heading east. It deviated from the NPR for a short distance and then returned to the corridor, to continue on the correct path.

End
